

Acting sustainably,
investing in *tomorrow*

Agenda

-
- EVN at a glance
 - Financial ambitions 2024-2030
 - ESG and innovation
 - Back-up information

Integrated business model as basis for our value chain

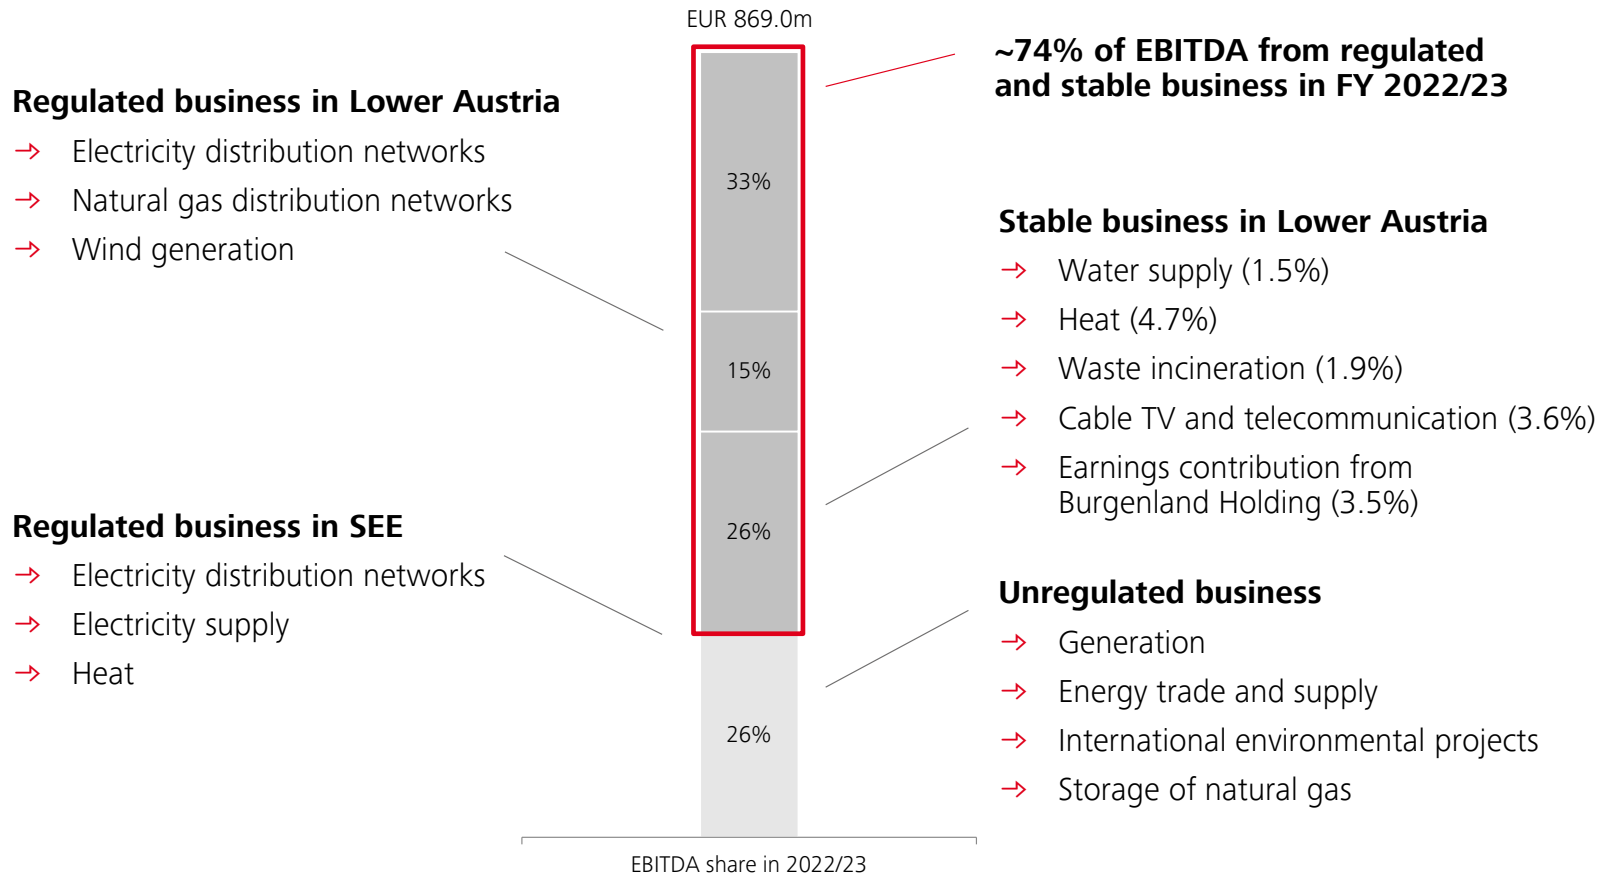

¹⁾ As of 30 September 2023

²⁾ Number of customers in brackets

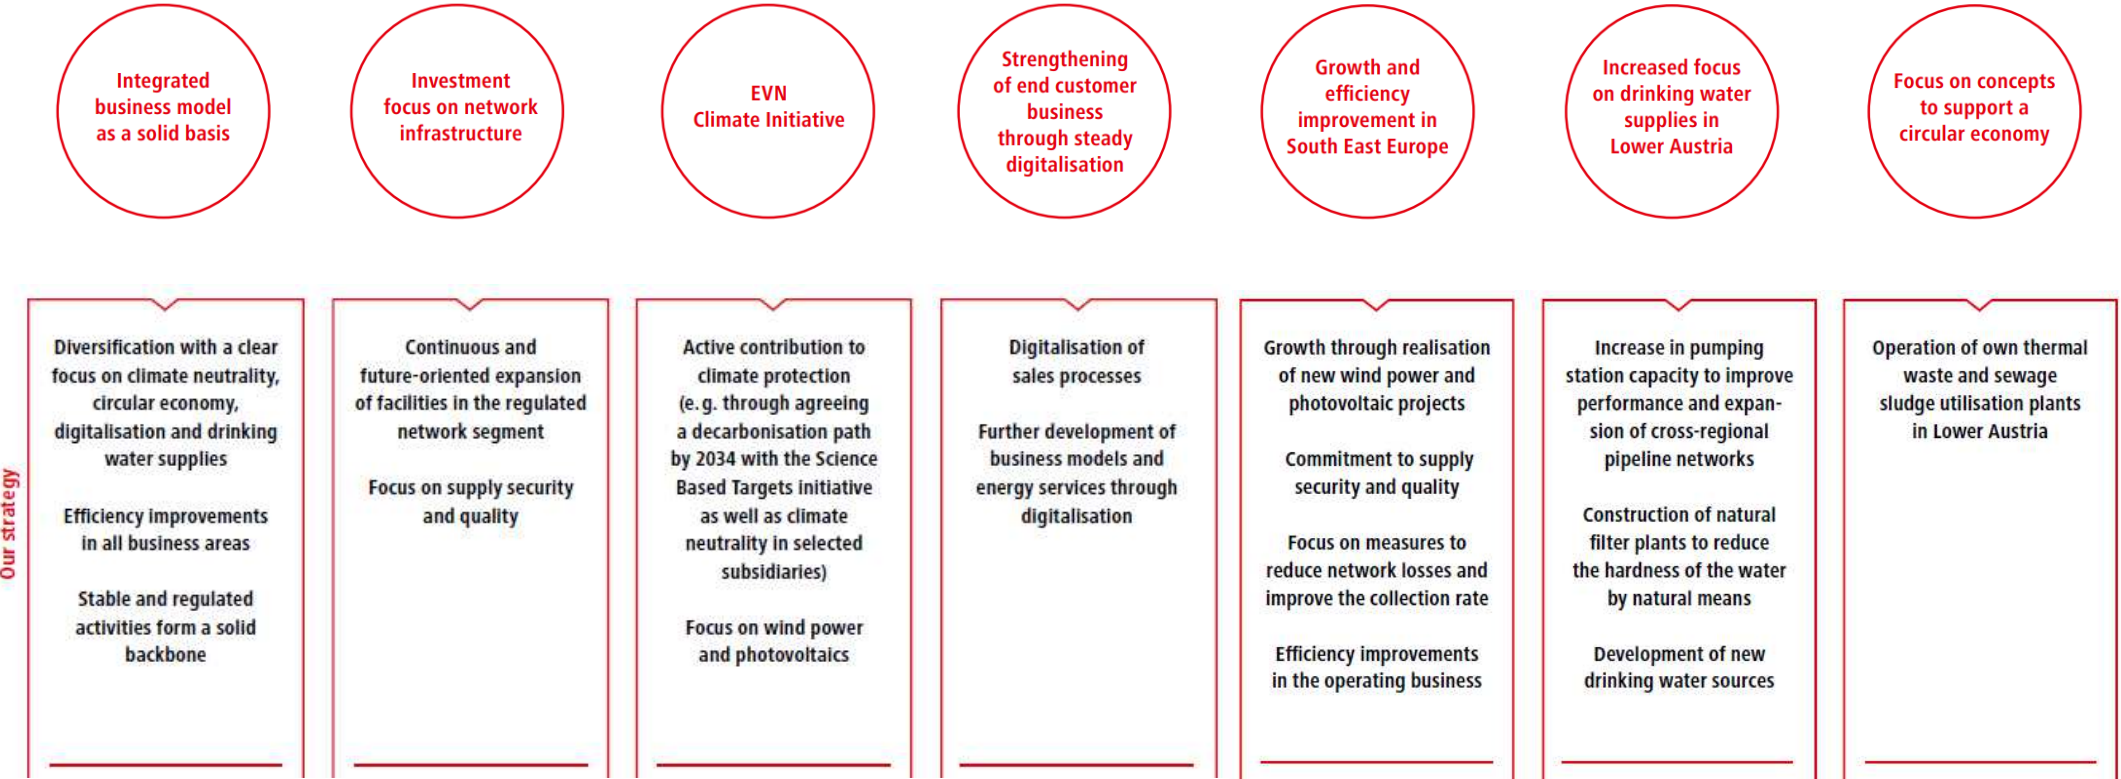

→ Foreign markets in the energy business

- Bulgaria: Electricity distribution networks, electricity supply, generation and heat
- North Macedonia: Electricity distribution networks, electricity supply and generation
- Selected activities in Germany, Croatia and Albania

High share of regulated and stable business

Our core strategies 2030

Massive increase of our Capex programme – annual investments in the range of EUR 700m to EUR 900m over the coming years

→ Structure of investments¹⁾ in FY 2022/23

¹⁾ In intangible assets and property, plant and equipment

→ Investment strategy

- Focus on networks, wind generation, heating, drinking water supply
- Approximately $\frac{3}{4}$ of investments to be made in Lower Austria

→ EU Taxonomy Regulation

Capex KPI:
88% share of taxonomy-aligned investments

Management of summer-winter-balance as future challenge – as illustrated by scenario for the residual total load in 2030

Scenario for the residual load in 2030; green: oversupply of electricity; red: electricity shortage

Creating value by doing the right things

→ Grid expansion

→ Innovation

→ Investing in renewable energy

Company presentation, January 2024

→ Focus on sustainability – ecologically & economically

Investment focus on network infrastructure as one of our core strategies 2030

- ~EUR 3 bn Capex in network infrastructure in Lower Austria until 2030 to enable the energy transition
- Key investment areas for electricity networks
 - Modernisation, expansion and digitalisation of infrastructure
 - Upgrading and construction of high-voltage power lines and primary substations (HV/MV)
 - Modernisation and expansion of medium-voltage capacities (secondary substations and local networks)
 - Digitalisation and intelligent control systems to operate the massive increase in decentralised electricity generation

Ambitious climate and energy goals 2030 as main challenge for network operators

→ Network capacity (in MW) in Lower Austria requires substantial expansion until 2030

→ Main drivers:

- Integration of volatile renewables generation from wind and photovoltaics (large-scale and households)
- Supply charging stations for e-vehicles and heating pumps

Regulated business in Austria

Network	Electricity	Natural gas	Comments
Regulatory authority			
Start of the regulatory period	01.01.2024	01.01.2023	
Next regulatory adjustment	01.01.2029	01.01.2028	Adjustment of WACC and productivity factors
Duration of the regulatory period	5 years	5 years	
Regulatory method	Revenue caps	Revenue caps	
RAB (EURm)	Annually adjusted	Annually adjusted	Annual investments are added to the RAB in the following year
WACC (pre-tax, nominal)	<ul style="list-style-type: none"> – New RAB: 6.33% – Existing RAB of DSO with average efficiency: 4.16% 	<ul style="list-style-type: none"> – New RAB: 4.88% – Existing RAB of DSO with average efficiency: 3.72% 	Set for length of regulatory period Higher WACC for existing RAB of DSO with above-average efficiency (such as EVN/Netz NÖ)
General productivity factor	0.40%	0.40%	Gains from cost reductions remain with the company during the regulatory period
Inflation	Annual adjustment	Annual adjustment	Network operator price index consists of consumer price index and wage increase index

Wind and photovoltaic expansion targets 2030 to be achieved on the back of a strong project pipeline

→ Planned wind expansion path until 2030¹⁾

– Projects in Lower Austria only

→ Potential growth in annual wind production²⁾

Company presentation, January 2024

→ Planned PV expansion path until 2030

– Projects in Lower Austria, Bulgaria and North Macedonia

→ Potential growth in annual PV production³⁾

- 1) Development also reflects various repowering projects
- 2) Assumption: 2,700 average full load hours
- 3) Assumption: 1,100 average full load hours in Austria; 1,400 average full load hours in Bulgaria and North Macedonia

Our success factors in wind generation

- Strong and well-balanced project pipeline in Lower Austria
- Continuous increase in turbine capacity
 - Under construction: 6 MW turbines
- Additional benefit from efficient operation
 - ~2/3 of annual wind production in Austria during winter half-year (at higher prices)
 - High availability of wind power plants
 - Synergies from EVN's long-standing expertise in marketing of own production (e. g. 24 hour trading)

Continuous efforts to achieve further operating improvements in SEE

→ Ongoing reduction in grid losses

→ Number of customers

- Bulgaria: 1.8m
- North Macedonia: 0.9m

→ Commitment to supply security

→ Investment strategy for SEE

- Expansion and upgrading of network infrastructure to continuously reduce network losses
- Replacement of metres to further improve collection rates

Drinking water business in Lower Austria – stable earnings contribution and future growth area

EVN's drinking water supply area in Lower Austria

- Largest regional drinking water supplier
 - 0.6m drinking water customers
 - Supra-regional pipeline networks and local water supply networks
 - Operation of 6 natural filter plants to reduce the hardness of water by natural means
- Expansion of cross-regional pipeline networks (until 2030)
 - ~EUR 150m total investments

Structured bidder process for international project business initiated in September 2023

- WTE Wassertechnik is well positioned for further international growth and expansion
 - Reference of more than 120 projects in 18 countries
 - Wastewater treatment project Umm Al Hayman (Kuwait): WTE's largest project and top reference for Arabic region
 - Track record in thermal utilisation of sewage sludge treatment as area with high future potential
 - Currently more than 10 projects under planning and construction (Germany, Poland, North Macedonia, Bahrain, Kuwait)
- Short- and mid-term growth potentials for WTE:
 - WTE was already approached to bid for further large projects in Kuwait
 - Expansion to new countries (e. g. within the Arabic region)

Significant contribution to EVN's net profit from strategic investments

¹) Contribution to EVN's result before income tax in FY 2022/23

→ Verbund AG

- #1 electricity producer in Austria and #2 hydropower producer in Europe with 8.2 GW installed capacity

→ Burgenland Holding AG

- Holds a 49% stake in Burgenland Energie (#1 green energy producer in Austria, distribution networks, sale of energy)

→ RAG Austria AG

- ~6.3bn m³ storage capacity for natural gas

EVN share – Shareholder structure and dividends

→ Shareholder structure

→ According to federal and provincial laws, the Province of Lower Austria is required to hold a stake of at least 51% in EVN

→ Dividend history

	2022/23 ¹⁾	2021/22	2020/21
Dividend per share (EUR)	0.52	0.52	0.52
Special dividend per share (EUR)	0.62	-	-
Payout ratio (%)	38.4	44.2	28.5
Dividend yield (%)	4.5	2.3	3.1

	30.09.2023	30.09.2022	30.09.2021
Share price (EUR)	25.30	17.04	22.95
Market capitalisation (EURm)	4,551	3,065	4,128

1) Dividends subject to approval by 95th AGM on 2 February 2024

→ Future dividend policy

- Annual dividend of at least EUR 0.82 per share
- Commitment to appropriate shareholder participation in future earning growth
- In the mid-term, reach payout ratio of 40% of Group net result (adjusted for extraordinary effects)

Outlook for FY 2023/24: Group net result is expected to range from EUR 420m to EUR 460m

Segments	Outlook 2023/24	Comments
 Energy	↑	Segment EBIT expected to be above prior year's level at the lower end of the range of EUR 45m to EUR 70m – Return of the results of the energy supply company EVN KG to positive levels expected; development in view of the gradual decline in spot and forward prices during 2023
 Generation	↘	Segment EBIT expected to be slightly below prior year's level – Under the assumption of wind and water flows corresponding to the long-term average – Decline in electricity prices
 Networks	↘	Segment EBIT expected to be below the previous year – Lower WACC in the new regulatory period for electricity distribution network expected – End customers' ongoing efforts to reduce energy consumption and negative macroeconomic
 South East Europe	↓	Segment EBIT expected to be below previous year at the range of EUR 70m to EUR 90m – Offsetting of regulatory compensation for additional costs for covering network losses which contributed to the unusually high segment results in 2022/23
 Environment	→	Segment earnings expected to be at prior year's level – Earnings dependent on the respective progress on international projects
 All other Segments	↓	Segment EBIT expected to be below prior year at the range of EUR 40m to EUR 50m – Dividend from Verbund AG is recognised in financial result

Outlook indication compared to earnings recognised in FY 2022/23

Key messages to our shareholders

- Leading infrastructure operator with high share of earnings from regulated and stable business
- Ambitious investment programme of EUR 700m to EUR 900m until 2030
 - Continuous expansion of domestic regulated and stable activities through focus on networks, wind generation, heating, drinking water supply
 - Expansion of wind and photovoltaics on track
 - Massive network and infrastructure investments will enhance RAB growth
- Sustainable company with ESG-focused strategy and active role in transition towards CO₂-free energy future
 - Continue decarbonisation path agreed with Science Based Targets initiative
- Robustness of integrated business model
- Benefit from all-electricity future
- Significantly higher level of Group net results (perspective 2024-2030)
- Highly reliable dividend stock

Agenda

-
- EVN at a glance
 - Financial ambitions 2024-2030
 - ESG and innovation
 - Back-up information

Electricity for ~3.5m customers in Lower Austria, Bulgaria and North Macedonia

→ Three core markets in electricity:

Company presentation, January 2024

→ Estimated growth of electricity demand¹⁾ in our three markets until 2030

- Increase in electricity demand despite energy efficiency; heating pumps and e-mobility as growth drivers
- Seasonal demand volatility due to photovoltaic production and electricity-to-heat

1) Electricity grid sales volumes as indication for demand

Future value drivers

Perspective 2024–2030

→ Segment Energy

- Consists of energy supply business Austria, heating business (mainly from biomass) in Austria and energy services
- EBIT margin supply business Austria 3-5%
- EBIT contribution EUR 45 to 70m p.a.

→ Segment Generation

- Production capacities to increase according to Strategy 2030
- Increase in renewables production from 2.2 TWh to 3.8 TWh by 2030
- Power market prices are expected to decrease (due to ongoing renewable capacities' expansion)
- Thermal production for network stabilisation and waste incineration to be run on a stable basis
- EBIT margin 30-35%

Future value drivers /2

Perspective 2024–2030

❌ → Segment Networks

- Regulated Asset Base * Regulated WACC
- EBIT increase +10% p.a. by 2030
- Development of RAB (in EUR bn; electricity and natural gas distribution networks)

Future value drivers /3

Perspective 2024–2030

-  → Segment South East Europe
 - Consists of electricity grid and supply in Bulgaria and North Macedonia, generation in North Macedonia as well as gas grid and supply in Croatia
 - ROCE >8% p.a.
 - EBIT between EUR 70 and 90m p.a.

-  → All other segments
 - Stable results from RAG and Burgenland Energie expected between EUR 40 and 50m p.a.
 - Dividend from Verbund AG mainly driven by development of power prices

Future value drivers /4

Perspective 2024–2030

→ Segment Environment

- Consists of stable water supply business in Austria and international project business
- Project business depends on order intake in international project business

Forecasted average ranges for international project business*	in mEUR
Turnover	550-600
EBIT	30-40
Employees	600 FTEs
Contingent liabilities	600-800

* Assumes business performance as currently projected and forecasted, including related assumptions as described on Slide 36.

Segment overview – Strategic EBIT targets Perspective 2024–2030

	Segment	Strategic targets on EBIT*
	Energy	EUR 45-70m
	Generation	EBIT margin 30-35%
	Networks Austria	EBIT +10% p.a.
	South East Europe	EUR 70-90m
	Environment	EUR 35-50m
	All other segments	EUR 40-50m

* mid- and long-term strategic targets; subject to fluctuations within and between segments, over years and deviations in individual years are possible

Strategic financial KPIs for EVN Group Perspective 2024–2030

	Perspective 2030*
Group net results	EUR 400-450m p.a.
ROCE	>5.5%
WACC	5.0%
Investments	EUR 700-900m p.a.
Net Debt / FFO (Funds from Operations)	1.5 – 2.0

* Specific guidance for individual years is communicated separately and included in our financial year-end annual financial report

Disclaimer to Section 'Financial ambitions 2024-2030'

-
- The slides 21-27 reflect the forward-looking expectations of EVN for future financial performance which are necessarily based on a number of assumptions and estimates about future events and actions, including management's assessment of opportunities and risks. Without limitation, the expectations are based on the following factors and assumptions:
- non-occurrence of unforeseen events such as extraordinary macroeconomic events and force majeure,
 - expected demand for energy as well as other products/services offered by EVN,
 - overall economic development in core markets in line with projections of recognised forecasting institutes,
 - energy market prices according to forward market and long-term studies,
 - a stable political and legal/regulatory framework in core markets,
 - implementation of the existing business plans,
 - non-occurrence of extraordinary valuation effects (e.g. impairments, derivatives), and
 - a generally unchanged competitive environment.
- Such assumptions and estimates are inherently subject to significant business, operational, economic and competitive uncertainties and contingencies, many of which are beyond EVN's control, and upon assumptions with respect to future business decisions that are subject to change. Should one or more of these assumptions prove to be inappropriate or incorrect EVN's actual results could materially deviate from the following forecasts.

Agenda

- Waste incineration
- District heating
- Own energy consumption (e.g. grid losses)
- Natural gas sales

Pilot plants for H₂ storage and alternative H₂ generation

- RAG's potential storage capacity: ~6.3bn m³
- Underground sun storage project
 - World's first project for a seasonal energy storage system with 100% hydrogen in a depleted natural gas reservoir
 - Project partners: RAG, EVN, research and industry partners
 - Storage capacity of ~8 GWh
 - Electrolyser capacity of 2 MWe
- Plasma electrolyser project
 - H₂ generation out of natural gas
 - Alternative to carbon capture and storage
 - Carbon black instead of CO₂

Sector integration for renewable and secure energy supply

City of Krems

Large-scale PV plant

Biomass-fired cogeneration plant

Utility-scale battery storage

Company presentation, January 2024

Hot water storage

Utility-scale heat pumps

Highly rated ESG performance underlines EVN's ambitions

 - ESG and innovation
 - Back-up information

Key financials FY 2022/23

	FY 2022/23	+/-
	EURm	%
Revenue	3,768.7	-7.2
EBITDA	869.0	15.1
Depreciation and amortisation	-336.5	-5.8
Effects from impairment tests	-3.9	96.3
EBIT	528.5	59.4
Financial results	127.6	-
Group net result	529.7	-
Net cash flow from operating activities	942.4	-
Investments ¹⁾	694.1	23.1
Net debt	1,364.3	9.6
	%	
Equity ratio ²⁾	58.8	-0.1
	EUR	
Earnings per share	2.97	-

¹⁾ In intangible assets and property, plant and equipment

²⁾ Changes reported in percentage points

→ Revenue below prior year's level

- Declining revenues in SEE due to decreased energy market prices and in the international project business
- Positively affected by price and volume effects in renewable electricity generation, valuation effects from hedges, higher revenue from natural gas trading, increased sales prices at EVN Wärme and higher network tariffs

→ EBITDA, EBIT above prior year

- Drop in cost of electricity purchases from third parties and primary energy expenses
 - Declining wholesale prices in SEE (regulatory compensation for additional costs for covering network losses – to be offset in the following year)
 - Contrasting factors: higher costs for network losses and upstream network costs in Austria, increased energy procurement costs
- Decline in results from at equity accounted investees driven by supply company EVN KG (EUR –240.3m)
- Significantly lower effects of impairment losses at y-o-y comparison

→ Higher dividend of Verbund AG

Solid balance sheet structure

- Strong balance sheet is the basis for EVN's ambitious investment programme
- Net debt increased y-o-y due to high investment level
- EVN's goal is to maintain solid A category ratings in the future; current credit ratings:
 - Moody's: A1, stable outlook (April 2023)
 - Scope Ratings: A+, stable outlook (May 2023)

Total financial debt of ~EUR 1.4bn with a well-balanced maturity profile over the coming years

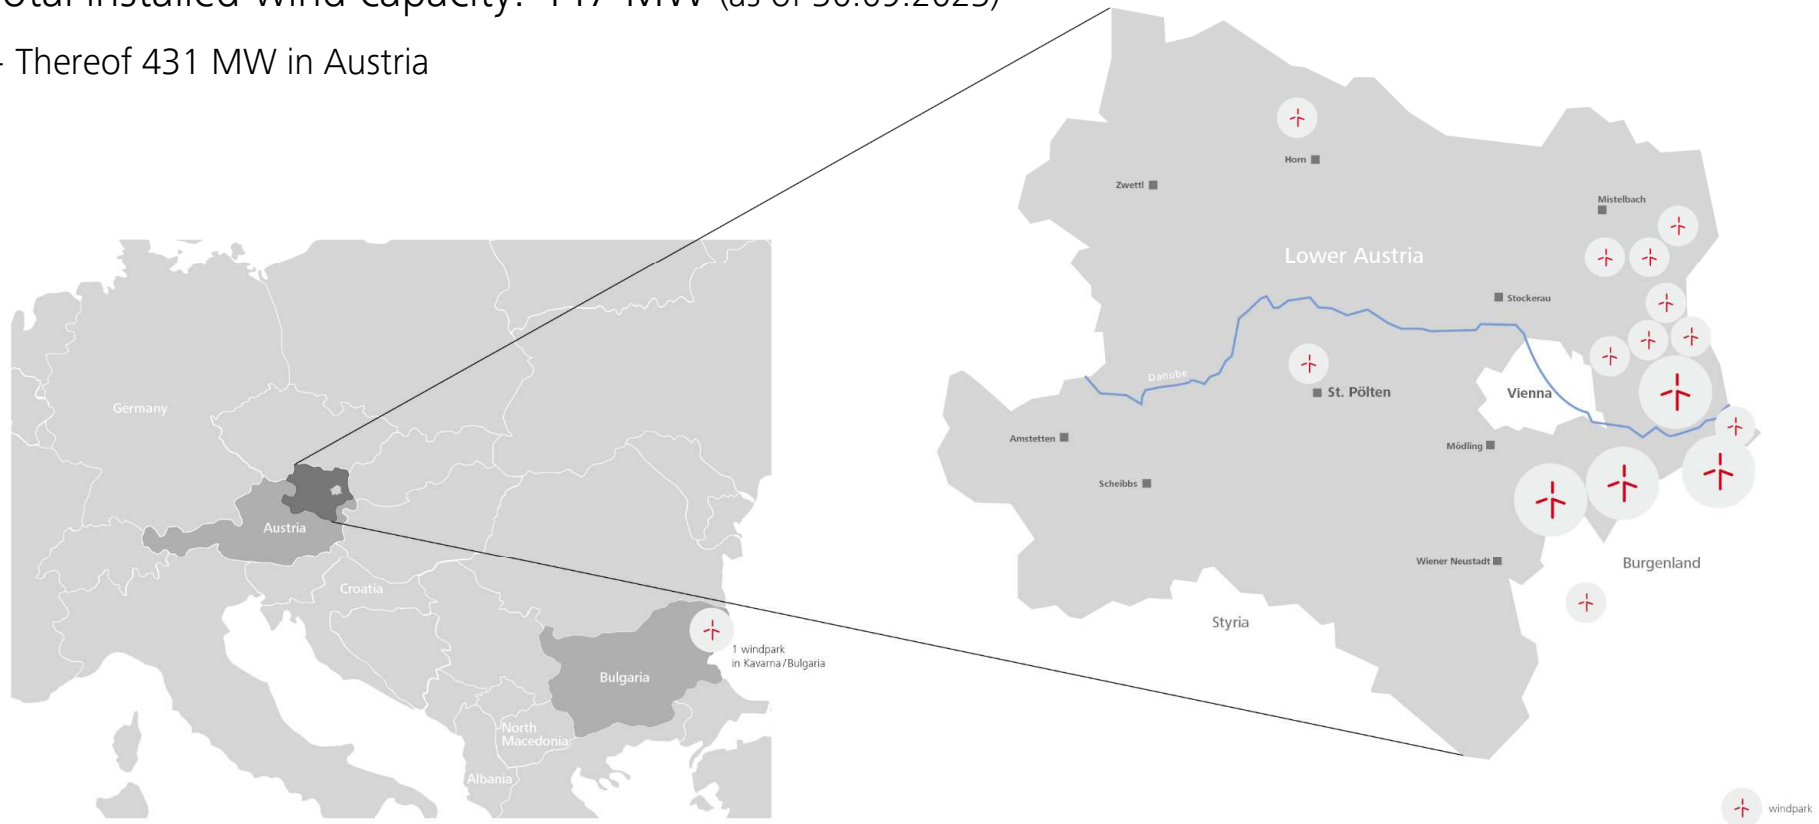

Debt maturity profile until FY 2029/30 (in EURm)

→ EUR 686m undrawn, committed credit lines (as of 30 September 2023)

EVN's renewable growth strategy is based on a constantly increasing wind generation portfolio

- Total installed wind capacity: 447 MW (as of 30.09.2023)
- Thereof 431 MW in Austria

Austrian legal framework for renewables

→ Green Electricity Act 2012

- Support scheme: Fixed feed-in tariff (~EUR 80-90 per MWh for wind)
- Tenor of support scheme: 13 years

→ Details

- No risks for marketing wind generation
- No costs for balancing power
- Opt-out option, return to feed-in tariff regime possible (within 1 month's prior notice)

→ Renewable Energy Expansion Act 2021

- Support scheme: Market premium (subsidy guarantees floor)
- Tenor of support scheme: 20 years

→ Details

- Risks for marketing renewable generation
- Risks for costs for balancing power
- Market premium is subject to correction factors
- Market premium (floor) for EVN's current projects: ~EUR 82 per MWh (wind), ~EUR 93 per MWh (PV)

We are constantly working on innovative solutions to enable efficient renewables generation

- Enable projects through ecological planning and special measures to protect biodiversity
 - Close cooperation with NGOs and authorities
 - Species protection measures
 - Compensation areas and alternative habitats for species
- Hybrid renewable energy projects
 - Use sites for both wind power and photovoltaics
- Synergies from building photovoltaic plants on former thermal generation sites
- Largest floating photovoltaic plant in Central Europe
 - Total installed capacity 24.5 MWp (EVN-share: ~12.3 MWp)
 - 45,000 PV modules

EVN is confident to reach its wind power expansion targets as planned by 2030 – albeit some challenges

Challenges

- Length of approval process (incl. long court proceedings)
- Acceptance of projects by local communities
- Grid connection
- Future land zoning for wind parks in Lower Austria

EVN's 2030 wind expansion target of 750 MW

Success factors

- EVN's strong track record in its home market lower Austria
- Strong project pipeline
- Sufficient land secured
- Ambitious political renewable expansion targets in Austria

Hedging and price-setting strategies in our energy business

Optima Garant Natur 12

- ✓ 12 Monate Preisgarantie
- ✓ 100 % CO2-frei
- ✓ 12 Monate Bindung

Company presentation, January 2024

→ Generation

- Hedging strategy for planned renewables generation on a rolling 12-18 months basis for quantities on the free market
- Fixed feed-in tariff for wind production (13 or 20 years; opt-out due to favourable market prices)
- Natural gas-fired electricity generation exclusively contracted as reserve capacity for the Austrian transmission network operator, therefore no hedging required

→ Supply

- Energy procurement is subject to contract type
- Different floating- or fixed-price supply contracts tailored to specific customer needs
- Hedging of contribution margin
 - Portfolio hedging strategy for indexed-price supply contracts
 - Back-to-back hedging (for fixed price contracts)

Challenging market environment
