

Competence

Half Year Report to June 30, 2007

02

To the Shareholders, Employees and Friends of the Company

Ernst Homolka
CFO and Board Spokesman

Dear Sir or Madam,

Nemetschek stands for competence and innovation, as our strong figures from the half year report of 2007 demonstrate. Sales improved by 37.7 percent to 69.8 million euros, and the EBITDA by 64.5 percent to 14.1 million euros. All business units have developed positively, in particular the Design segment, where Graphisoft made the main contribution. Here, we were able to surpass our ambitious targets for the first six months.

As the leading provider of software and consulting services for the whole life cycle of a building, we are well aware of our customers' needs. The industry is characterized by permanent time and cost pressures and high quality demands. As a result, we are continuously working on making the applications even more powerful, open and intuitive.

Nemetschek is committed to improving and enhancing the new file format IFC – Industry Foundation Classes. IFC is at the forefront of our product strategy and supports the manufacturer- and platform-independent, object-oriented representation of building model data. With this standard, we can ensure smooth data exchange between all those involved in the construction process. This is an important step on the road to a fully integrated, intelligent building model (BIM).

In this context, Nemetschek supports the growing trend towards Building Information Modeling (BIM), that is, the transition from drawing-based work to the three-dimensional modeling of building data. All those involved are provided with centralized information relating to a building – across its complete life cycle, from planning and construction right through to management.

In other words: In future, architects, civil engineers, facility managers and clients will all speak the same language. This saves time, ensures smooth processes and increases profits for our customers.

Our shareholders should also benefit from our success at home and abroad. At the AGM in May, a dividend was paid out, for the third time in a row. For the 2006 financial year, this was 0.56 euros per share. We are continuing to trust in an ongoing dividend policy and plan a payout for the current financial year. Shareholders are also benefiting from the development of the share price: In the first six months of this year, the share saw a growth in value of around 24 percent.

Even more good news: our annual report has received the gold award in the international "Vision Awards" annual report competition organized by the League of American Communication Professionals (LACP). The annual report achieved 96 out of 100 possible points, and came top in five out of ten categories. The clarity and structure of the report and the preparation of the consolidated figures received special praise.

The signs are also good for the second half of the year: our strong market position and the high acceptance of our solutions among customers at home and abroad give us cause for optimism. As the same time, we can expect sustained impetus as a result of the all-round positive outlook in the AEC environment. With annual sales of more than 140 million euros, 270,000 customers, software in 16 languages and over 1,000 employees, we are well-equipped for the future.

Best regards,

Ernst Homolka
CFO and Board Spokesman

The Share

Continuing increase in value

The AGM on May 23, 2007 in Munich impressively documented the successful development of the Nemetschek Group last year. Positive news from the company also gave the shares a boost: the share price for the Nemetschek shares was 22.22 euros at the start of the year. As the year progressed, it continually gained in value, peaking on May 10 at 29.90 euros. Profit-taking resulted in side-stepping, and on June 30, 2007 the value stood at 27.50 euros – an increase of around 24% since the start of the year.

The capital market's interest in the Nemetschek stock remains high. In the reporting period, Berenberg, WestLB and Sal. Oppenheim published updates to their studies. BHF-Bank also started coverage. All banks still recommend the purchase of Nemetschek stock with share price targets of up to 33 euros. The managing board sees communication with the capital market – shareholders, investors, analysts and the media – as an important task, and its activities reflect this. In the first half of the year, Nemetschek was represented at numerous key financial centers, including Amsterdam, London and Paris, and also provided interviews and background meetings with leading financial media.

Nemetschek and Adobe Ensure Seamless Data Exchange in the Building Process

End-to-end processing of projects and the exchange of building data between all those involved in the building process has been rare up until now, even though it could help to eliminate errors during planning and the resulting construction losses. Project data is often sent on paper, so descriptions or building sections need to be subsequently added by hand. Alternatively, software systems are often incompatible, leading to either lost data or additional costs for forwarding information. End-to-end data exchange, based on standard formats and which links and integrates all team members, is required for more efficient planning processes.

Nemetschek and Adobe are working together towards this goal. Both companies want to eliminate the current restrictions in performance and openness during data exchange. PDF format will act here as the central component for modern document processes in architecture and the building industry.

In practice, this means that users can convert their CAD models into PDF format and thus leverage the combined strengths of Allplan, ArchiCAD, VectorWorks, CINEMA 4D and Acrobat for 2D and 3D document workflows. All the products in the Nemetschek Group use the same technology, and all applications can therefore communicate with each other at document level.

The use of PDF therefore gives the construction industry and users the opportunity to secure an end-to-end planning process right through to facility management. In future it will be easier for architects and engineers to exchange and match drawings and project documents with customers and partners. The use of a standardized data format allows all participants to be integrated in the building coordination process without technical complications, ensuring successful release and clarification processes. This means optimized processes for senders and recipients and thus shorter planning cycles coupled with lower project costs.

Those involved in planning can evaluate all the details of the planned building and analyze them via walkthrough.

Nemetschek Continues on Growth Course

The construction and real estate industry is on the up. More and more architects, designers, facility managers, construction companies and general contractors are using Nemetschek software for design, construction and management, as the good results of the first half-year confirm. In the Design business unit, we have laid the foundation stone for further growth with new versions of our CAD and cost management software Allplan and Allright 2006.2. Both products meet the requirements for „Works with Windows Vista“ and may carry the corresponding logo.

The second quarter was also marked by the further development of our IFC strategy. With the open standard, we want to promote the smooth exchange of component-oriented data between our core products and other systems that support this standard. All current versions of Allplan, ArchiCAD and VectorWorks received the highest certification for the IFC interface from the IAI (International Alliance for Interoperability) in spring.

We have also enjoyed good development abroad. In Austria, Switzerland and Italy, architects and designers can determine quantities and costs even more reliably. The Design2Cost cost accounting method from Nemetschek is now also available in these countries.

The demand for civil engineering software rose again in the second quarter. In June, we presented the D-planning package in Germany as an enhancement to Allplan Civil Engineering. It contains an extensive collection of CAD planning data for more efficient management of projects. At Glaser, the new steel construction program Stahl 3D had a positive effect on business development. Friedrich + Lochner also shone with excellent results. A new program for calculating wind and snow loads was just one of the things contributing to the company's success.

The mood among construction companies has improved greatly since last year, revealed by their increasing willingness to invest in construction software. As a result, the cost accounting program Bau for Windows of Nemetschek Bausoftware saw a two-figure increase to new customers in the past quarter. The joint sales activities for marketing by AUER financials and the Austrian subsidiary AUER are well under way and are already bearing fruit.

The Multimedia business unit exceeded expectations once again. With a new CINEMA 4D package for architecture visualization and service updates for CINEMA 4D and Bodypaint, MAXON, our specialist for 3D animation software, contributed to a sustained increase in sales.

Interim Report for the First Half of 2007

General economic situation and industry environment

Global economy in phase of economic adjustment

The global economy is still in very good shape. For three years now, global growth has been far higher than the long-time average of around 4% and this year again, growth of around 5% is expected. However, we are currently experiencing a certain amount of upheaval: the economic situation in the United States, previously a consumption driver for the global economy, has noticeably weakened since the start of the year, as a result of a tighter monetary policy and a crisis on the real estate market.

Global AEC market continues to grow

The US market research institute Gartner forecasts healthy growth of 7.7% until 2010 for the AEC market as a whole and for architecture software in particular as a result of the boom in the construction industry, in particular in China and India. In addition, customers are increasingly discovering the advantages of BIM (Building Information Modeling), which will have a positive effect on the demand for architecture software.

Consolidated Income Statement for the Period from January 1 to June 30, 2007 and 2006

Thousands of €	2nd quarter 2007	2nd quarter 2006	6 month 2007	6 month 2006

German economy experiencing strong upturn

The Organisation for Economic Co-operation and Development (OECD) has significantly increased its economic forecast for Germany. The Organisation has raised its growth expectation for Germany from 2.2 to 2.5% for the year as a whole.

Growth course continues in the construction industry

In 2007, the German construction industry has been able to sustain the economic upturn of 2006. For 2007, the industry can therefore expect a clear increase in sales of nominally 5%, according to the German construction industry association HDB.

Profitable growth in all segments

In the first half of 2007, the Nemetschek Group was able to improve sales revenue and EBITDA with a continuingly positive economic and market situation. In the first six months of 2007, Graphisoft contributed to the sales revenue and earnings of the Nemetschek Group for the first time.

Revenue increased to 69.8 million euros, EBITDA rises to 14.1 million euros

Compared to the previous year, group revenues increased by 37.7% to 69.8 million euros with all business units reporting an increase in revenue. In the Design business unit, revenue increased by 46.3%, 15.9 million euros of which were generated by Graphisoft.

The group EBITDA increased by 64.5% to 14.1 million euros (previous year: 8.6 million euros). This results in an EBITDA margin of 20.3% (previous year: 17.0%). The group EBITDA without Graphisoft, of 9.8 million euros (previous year: 8.6 million euros), increased by 14.9%. This corresponds to an EBITDA margin of 18.3% (previous year: 17.0%). With an EBITDA of 4.3 million euros, Graphisoft achieved an EBITDA margin of 26.8%.

Foreign revenue grow by 47.6%

The Nemetschek Group saw strong growth abroad, from 29.8 million euros to 43.9 million euros, corresponding to a growth rate of 47.6%. On the German market, the Nemetschek Group profited from the positive economic

Consolidated Balance Sheet as of June 30, 2007 and December 31, 2006

Assets	Thousands of €	June 30, 2007	December 31, 2006
Current assets			
Cash and cash equivalents		33,826	32,033
Securities		1,521	3,820
Trade receivables, net		21,134	24,680
Inventories		919	814
Tax refunded claims from income taxes		2,272	2,139
Prepaid expenses and other current assets		4,994	19,509
Assets classified as held for sale		560	560
Current assets, total		65,226	83,555
Non-current assets			
Property, plant and equipment		4,270	4,508
Intangible assets		63,531	67,043
Goodwill		50,784	43,560
Shares in associates/financial assets		361	484
Deferred taxes		3,366	3,354
Other non-current assets		1,536	1,628
Non-current assets, total		123,848	120,577
Total Assets		189,074	204,132

situation. Domestic revenues rose to 25.8 million euros (growth: 23.8%). For the first six months, the relationship between domestic and foreign revenue was 37.0% (previous year: 41.2%) to 63.0% (previous year: 58.8%).

New impetus in all segments

Compared to the same period of the previous year, all business units saw an increase. The Design business unit rose from 38.3 million euros to 56.1 million euros, and the EBITDA margin was 18.8% (previous year: 16.5%).

Revenue in the Maxon Group increased by 15.3% in the Multimedia business unit, with an EBITDA margin of 32.4% (previous year: 20.6%) contributing to the consolidated results. This is due in particular to the current version of the CINEMA 4D product and strong revenue in the United States. In the Manage business unit, CREM Solutions increased revenue by 12.9% thanks to a higher demand for ERP solutions. This is also reflected in a very positive EBITDA of 0.4 million euros (previous year: –0.3 million euros). In the Build business unit, revenue saw a slight increase of 7.4%. At 29.1%, the EBITDA margin is almost at previous year's level (30.4%).

Good earnings increase cash flow for the period

The higher EBITDA in the first six months of the financial year also had a positive effect on cash flow. The cash flow for the period increased to 13.1 million euros (previous year: 8.6 million euros). Cash flow from normal business activities rose by 5.2 million euros to 16.2 million euros.

Cash flow from investing activities is –98.5 million euros, 97.2 million euros of which was paid for the final acquisition of 100% of the Graphisoft SE shares. On June 30, 2007 the group had already repaid 22.0 million euros of the bank loan taken out for financing purposes. Cash flow from financing activities contains the dividend payout of 0.56 euros per share, paid on May 24, 2007. After repayment of the bank loan and payment of the dividend, the liquid assets on the key date were 33.8 million euros (on December 31, 2006: 32.0 million euros).

Equity and liabilities	Thousands of €	June 30, 2007	December 31, 2006

Equity ratio stable at 29.4%

The current assets were reduced by 18.3 million euros primarily as a result of the repayment of the loan by Graphisoft Park Kft. (14.5 million euros) to Graphisoft SE. The value of non-current assets rose by 3.3 million euros.

On the one hand, Graphisoft SE's goodwill increased following acquisition of the remaining shares. On the other, the group wrote off 3.7 million euros of assets as planned from the purchase price allocation. 10.6 million euros of the current liabilities relate to the current portion of the bank loan from the Graphisoft acquisition including interest. 69.5 million euros of the non-current liabilities relate to the long-term portion of the bank loan. The equity capital is 55.6 million euros (December 31, 2006: 55.1 million euros). This is equivalent to an equity ratio of 29.4% (December 31, 2006: 27.0%).

Earnings per share of 0.59 euros

The Nemetschek Group slightly increased its net income to 5.9 million euros despite depreciation from purchase price allocation of -3.7 million euros (previous year: 0 million euros), and interest of -2.5 million euros (previous year: 0 million euros). The earnings per share (basic) of 0.59 euros are at the same level as previous year.

Special events

In mid-May, Dr. Peter Mossack, Vice President of Research and Development, left the company to pursue new professional challenges.

100% of Graphisoft shares were transferred to Nemetschek with effect from June 14, 2007. This was also the last day of trading for the Graphisoft stock on the Budapest stock exchange.

Significant business with affiliates did not occur in the reporting period.

Employees

On June 30, the Nemetschek Group employed 1,085 people, 201 more than in the same period of the previous year. The increase in employees is due mainly to the Graphisoft acquisition.

Opportunity and risk report

In the 2006 financial year, Nemetschek reported in detail on the various risks the group believes it is exposed to. This report explained what measures are used to counter the individual risks. The most important risks, which could lead to a significant worsening of the Nemetschek Group's economic situation, are in the market- and industry-related sphere. The risk is disseminated through a broad customer base and wide-ranging product portfolio. We describe the corresponding opportunities in the Outlook in this report and in detail in the Outlook in the 2006 annual report.

Forecast report

For 2007, the growth forecast for business as a whole is very positive. The German economy, in particular, may see strong growth again in the fourth quarter of this year, according to OECD. Nemetschek is likely to profit from this, and in addition, Nemetschek assumes there will be an increase in demand as a result of the new software generation, which is to be launched in fall. Management therefore expects a sustained increase in sales, in particular in the fourth quarter, and with a two-digit increase for the year as a whole for both sales revenue and operating profit.

Oath on the Financial Statements

"Responsibility statement"

Section 37y of the WpHG in conjunction with section 37w para. 2 no. 3 of the WpHG

"To the best of our knowledge, and in accordance with the applicable reporting principles for interim financial reporting, the interim consolidated financial statements give a true and fair view of the assets, liabilities, financial position and profit or loss of the group, and the interim management report of the group includes a fair review of the development and performance of the business and the position of the group, together with a description of the principal opportunities and risks associated with the expected development of the group for the remaining months of the financial year."

Member of the Managing Board

Quarterly Statement based on IAS/IFRS

The Nemetschek Group's quarterly statement is compiled in accordance with the International Accounting Standards Board's (IASB) International Financial Reporting Standards. The consolidated financial statement on June 30, 2007 is unaudited. It is based on the same accounting, appraisal and calculation methods as the annual financial statement dated December 31, 2006.

The group of companies corresponds to the situation on December 31, 2006 with the following differences:

- Acquisition on May 23, 2007: Participation of SCIA Group nv, Herk-de-Stad, Belgium to 70% in the newly founded Online Projects bvba, Herk-de-Stad, Belgium.
- Disposal on June 30, 2007 of 100% of shares in NEMETSCHKEK kft., Budapest, Hungary.

VectorWorks Helps Revitalize Amherst College

North College, Amherst College

Founded in Massachusetts in 1821, Amherst College is widely regarded as the premier liberal arts college in the US. In 2001, the college initiated a comprehensive renovation program to renovate five historic residence halls. The college wanted to preserve the historic character of the five buildings, yet provide the functionality and modern conveniences of new construction. To do so, senior administration enlisted the help of Sacco + McKinney Architects, PC, a New York firm with expertise in historic renovation and restoration work. The goal was to achieve life safety and accessibility compliance equal to those required of new construction, while preserving the historical elements. That's where VectorWorks came in.

Communicating design intent

The conversion of Williston Hall (1858) from a classroom building to a residence hall was one of the first components of Amherst's residential master plan. Construction required careful dismantling of the interior wood timber frame structure and replacing it with a steel and concrete floor system.

When it came to renovating the classrooms into living space, the 3D modeling capabilities built in VectorWorks helped the residence life staff and administration to visualize the floor plans. So Sacco + McKinney showed them 3D models created using RenderWorks, a visualization plug-in for VectorWorks.

South College and North College are the original buildings of Amherst College and form the centerpiece of historic College Row. Both needed extensive restoration and reconstruction of the original brick walls using historically appropriate lime putty mortar and a complete interior redesign. In addition, new exterior pathways needed to be added and sensitive modifications had to be made to entries to make them wheelchair accessible.

Sacco + McKinney used the digital terrain modeling technology within VectorWorks to accurately show the impact of the new accessible walkways that were needed to meet code requirements. College trustees were initially skeptical and concerned about potentially negative impacts on the historic settings, but once they viewed the 3D models, they were reassured.

From communicating design intent to quantifying construction materials, Sacco + McKinney relied on VectorWorks to successfully complete the renovation and restoration of these and other buildings on Amherst College's campus. "VectorWorks has given us the building blocks for efficiency—a large part of our success and client satisfaction is predicated upon how long it takes us to get a project in and out the door. And using VectorWorks has expedited that process every step of the way", says Jim McKinney from Sacco + McKinney.
